

Table of Contents

Preface and Acknowledgments	v
--	---

Introduction	vii
-------------------------------	-----

References and Codes Used to Prepare This Book	ix
---	----

Chapter 1: Reinforced Concrete Design

1. Strut-and-Tie Models	1-1
2. Corbels	1-5
3. Design for Torsion	1-7
Practice Problems	1-12
Solutions	1-12

Chapter 2: Foundations

1. Eccentrically Loaded Column Bases	2-1
Soil Pressure Distribution	2-1
Factored Soil Pressure	2-3
Design for Punching Shear	2-4
Design for Flexural Shear	2-6
Design for Flexure	2-7
Transverse Reinforcement Band Width	2-8
Transfer of Force at Base of Column	2-9
2. Combined Footings	2-11
Soil Pressure Distribution	2-11
Factored Soil Pressure	2-12
Design for Punching Shear	2-13
Design for Flexural Shear	2-14
Design for Flexure	2-15
3. Strap Footings	2-16
Soil Pressure Distribution	2-17
Factored Soil Pressure	2-19
Design of Strap Beam for Shear	2-20
Design of Strap Beam for Flexure	2-21
Practice Problems	2-22
Solutions	2-23

Chapter 3: Prestressed Concrete Design

1. Strength Design of Flexural Members	3-1
Basic Principles	3-2
Flexural Strength of Members with Bonded Tendons	3-4
Flexural Strength of Members with Unbonded Tendons	3-5
2. Design for Shear and Torsion	3-6
Design for Shear	3-7
Shear Capacity of Shear Reinforcement	3-10
Design for Torsion	3-10
3. Prestress Losses	3-15
Friction Losses	3-15
Anchor Seating Losses	3-16
Elastic Shortening Losses	3-16

Creep Losses	3-17
Shrinkage Losses	3-18
Relaxation Losses	3-19
4. Composite Construction	3-19
General Considerations	3-20
Shear Connection	3-21
Design for Flexure	3-22
5. Load Balancing Procedure	3-24
6. Concordant Cable Profile	3-26
Practice Problems	3-28
Solutions	3-28

Chapter 4: Structural Steel Design

1. Plastic Design	4-1
General Considerations	4-2
Plastic Hinges	4-2
Shape Factor	4-3
Plastic Hinge Formation and Load Factors	4-4
Statical Design Method	4-5
Beam Bracing Requirements	4-6
Mechanism Design Method	4-7
Static Equilibrium Check	4-9
Column Design Requirements	4-10
2. Eccentrically Loaded Bolt Groups	4-12
Bolt Group Eccentrically Loaded in the Plane of the Faying Surface, LRFD Method	4-12
Bolt Group Eccentrically Loaded in the Plane of the Faying Surface, ASD Method	4-13
Instantaneous Center of Rotation, LRFD Method	4-15
Instantaneous Center of Rotation, ASD Method	4-16
Bolt Group Eccentrically Loaded Normal to the Faying Surface, LRFD Method	4-16
Bolt Group Eccentrically Loaded Normal to the Faying Surface, ASD Method	4-18
3. Eccentrically Loaded Weld Groups	4-20
Weld Group Eccentrically Loaded in the Plane of the Faying Surface, LRFD Method	4-20
Weld Group Eccentrically Loaded in the Plane of the Faying Surface, ASD Method	4-22
Instantaneous Center of Rotation, LRFD Method	4-24

Instantaneous Center of Rotation,
ASD Method 4-25

Weld Group Eccentrically Loaded
Normal to the Faying Surface,
LRFD Method 4-26

Weld Group Eccentrically Loaded
Normal to the Faying Surface,
ASD Method 4-27

4. Composite Beams 4-29

General Considerations 4-29

Composite Beam Design, LRFD Method . . . 4-30

Composite Beam Design, ASD Method . . . 4-31

Shear Connection Design, LRFD Method . . . 4-33

Shear Connection Design, ASD Method . . . 4-33

Practice Problems 4-34

Solutions 4-35

Chapter 5: Design of Wood Structures

1. Design Principles 5-1

General Design Requirements 5-2

Adjustment Factors Applicable Only
to Sawn Lumber 5-2

Adjustment Factors Applicable Only
to Glued Laminated Timber 5-3

Adjustment Factors Applicable to Both
Sawn Lumber and Glued Laminated
Members 5-4

2. Design for Flexure 5-6

Flexural Design of Sawn Lumber 5-7

Flexural Design of Glued Laminated
Timber Members 5-9

3. Design for Compression 5-10

Axial Load Only 5-11

Combined Axial Compression and Flexure . . 5-14

4. Design for Tension 5-16

Axial Tension 5-16

Combined Axial Tension and Flexure 5-17

5. Design for Shear 5-18

General Requirements Applicable to Sawn
Lumber and Glued Laminated Members . . 5-19

Notched Beams 5-20

Shear at Connections 5-21

6. Design of Connections 5-22

Adjustment of Design Values 5-23

Bolted Connections 5-26

Lag Screw Connections 5-27

Split Ring and Shear Plate Connections . . . 5-29

Wood Screw Connections 5-30

Connections with Nails and Spikes 5-31

Practice Problems 5-33

Solutions 5-34

Chapter 6: Design of Reinforced Masonry 6-1

1. Design Principles 6-1

General Design Requirements 6-1

Load Combinations 6-2

Effective Span Length of Beams 6-2

2. Design for Flexure 6-4

Dimensional Limitations of Beams 6-4

Beam Reinforcement Requirements 6-4

Development Length and Splice Length
of Reinforcement 6-5

Design of Beams with Tension
Reinforcement Only 6-6

Analysis of Beams with Tension
Reinforcement Only 6-9

3. Design for Shear 6-10

Shear Reinforcement Requirements 6-10

Design of Beams for Shear 6-11

4. Design of Masonry Columns 6-12

Dimensional Limitations of Columns 6-12

Column Reinforcement Requirements 6-12

Axial Compression in Columns 6-13

5. Design of Special Reinforced Masonry Shear Walls 6-14

Shear Wall Reinforcement Requirements . . . 6-14

Shear Capacity of a Shear Wall without
Shear Reinforcement 6-15

Shear Capacity of a Shear Wall with
Shear Reinforcement 6-16

6. Wall Design for Out-of-Plane Loads 6-18

Flexural Strength 6-18

Maximum Reinforcement Ratio for Walls . . . 6-20

Design Loads 6-21

Service Load Deflections 6-23

7. Design of Anchor Bolts 6-24

Headed Anchor Bolt in Tension 6-24

Headed Anchor Bolts in Shear 6-25

Headed Anchor Bolts in Combined
Tension and Shear 6-26

8. Design of Prestressed Masonry 6-26

General Considerations 6-27

Construction Technique 6-27

Serviceability Design Stage 6-28

Transfer Design Stage 6-30

Strength Design Stage 6-31

Practice Problems 6-33

Solutions 6-34
